

Focal brings hi-fi sound to the desktop

If you spend a lot of time in front of a laptop or desktop computer, chances are you'll want a little background music. But your average computer's built-in speakers sound about as endearing as a flu-ridden *X-Factor* reject. Your best bet to improve this is to invest in a pair of desktop speakers.

Focal is better known for its dedicated hi-fi speakers, but you'd probably think that such an established manufacturer would have all the right tools, and speaker parts, for the job. And you'd be right.

Big for a desktop speaker

The XS Books are decent-sized speakers. Much taller and larger than the likes of B&W's MM-1s, the XS Books are about as big as we'd like a desktop speaker to be. They're built with traditional materials: a 19mm aluminium dome tweeter is employed alongside a 10cm polyglass mid/bass driver. There's even a vented bass-reflex port to help improve bass performance, while a 20W per channel amplifier in the right speaker completes the internal specification. You can connect external sources via either the 3.5mm input or the pair of phono connections - the relevant cables are also supplied in the box. A dial on

one speaker doubles as a power switch and volume control. There's no remote control.

The speakers are perfectly at home with classical music. When dealt John Williams' score to the recent *TinTin* film, the speakers sound spritely and dramatic. Instruments are positioned well, within a concise soundstage. They give no impression that they're holding back, nor do they sound as if they're on the very limit and having to

USE IT WITH

Apple Macbook

The Focals look and sound the part when partnered with this,

work overly hard. Swap to the spritely *Animal* by Neon Trees and the expressive, nature of their delivery is brought to the fore. The track bounces along tunefully without hesitation.

The sheer sense of scale and weight produced by the Focals is a real advantage over other desktop speakers at this price, some of which are a compromised due to construction or size. It'll be interesting to see how they stack up against close rivals.

Rating ★★★★★

FOR Sensational scale and presence for a desktop speaker; detailed, dynamic sound; good stereo image

AGAINST Could be too big for some desktops

VERDICT A potent-sounding speaker, which brings hi-fi listening to your desktop
