Bring your digital world together with NDX

MAKE IT BETTER: Incredible upgrades that'll make your set-up sing

Welcome to the future of hi-fi

The way we listen to music is evolving. CDs and vinyl are being replaced with digital music formats, and hard drives and streaming devices now help us find, store and enjoy massive libraries of music.

Naim's range of digital systems and separates is specifically designed to bring out the best from your media, so you can now enjoy true high-fidelity sound coupled with the convenience of digital music.

The digital collection includes a range of separate units, as well as a choice of convenient and compact all-in-one systems, so there's a solution for every living space. What's more, they can be easily networked together to form an exceptional multi-room set-up.

It's time to upgrade to a next-generation audio system.

In association with

THE EVOLUTION OF SEPARATES

State-of-the art
solutions for the
digital generation

Listening to digital music stored on a hard drive or streamed from the internet used to mean a compromise in sound quality. But now Naim's new breed of multi-talented separates brings audiophile performance to your digital library

Naim NDX Stream hi-fi quality audio

The NDX is a versatile digital network player that allows you to access audio files from a wide variety of digital sources, including iTunes, NAS drives and media libraries on a PC or Mac. For flexibility, it connects through either a wired or wireless UPnP connection, and the NDX enables you to listen to thousands of internet radio stations. An optional FM/DAB module is also available. The front-panel USB socket, meanwhile, allows for easy playback from Apple devices and

USB-stored audio. You can also control the NDX via Apple devices using Naim's neat n-Stream app.

- Stream from music servers, NAS drives and PCs or Macs using Ethernet or Wi-Fi
- Compatible with high-res 24bit/96kHz streams and key digital formats, including WMA, MP3, AAC, Apple Lossless (from iPod), WAV, FLAC, AIFF and Ogg Vorbis
- Onboard DAC with three independently selectable 24bit/192kHz-capable S/PDIF inputs >

Naim HDX The ultimate digital all-rounder

If you're looking for an effortless way to rip, store, catalogue and play your music in superb quality then the HDX provides a simple solution. It features both a CD drive and a 1TB hard disk drive, providing enough storage space to rip up to 1200 uncompressed

albums. They're ripped using Naim's custom-designed ripping engine, which reads each disc multiple times to create bit-perfect digital versions. Thanks to the Naim Extended Music Database, you also get complete track and artist information. The HDX will also scan for and then play music stored elsewhere on your network.

- 1TB hard drive, with unique ripping engine and Naim Extended Music Database
- Playback of high-resolution 24bit/192kHz files
- An HDX-SSD variant is available for people who prefer to store their music solely on the network
- Full-colour touchscreen display, PC, Mac or n-Serve app control

Perfect partners

Once you've made the choice between the streaming NDX or the hard drive based HDX, the next step is to choose the perfect components to complement their capabilities...

The Naim SUPERNAIT integrated amplifier offers superb connectivity coupled with world-class audio performance. It features both

analogue and digital inputs, as well as onboard digital-to-analogue conversion. The NAC 202 preamplifier and NAP 200 power amplifier, meanwhile, are the entry level pre/power combo in Naim's Classic Series and the perfect first partners for an HDX or NDX.

App control

Naim has developed two dedicated apps so you can access, browse and organise your music library using an iPad, iPhone or iPod Touch: n-Stream is compatible with the NDX, Naim Uniti and UnitiQute and also offers control of internet, DAB and FM radio, while n-Serve offers media browsing and playback on the HDX and UnitiServe.

UPnP explained

Naim streaming devices use the networking protocol UPnP (Universal Plug 'n' Play) to communicate, which lets them easily locate media on your network and for them to work with UPnP players. The exceptions are the HDX and UnitiServe, which also use SMB network share scanning to look for media files stored on any device, including non-UPnP ones, making them available for local playback.

Incredible upgrades

Naim's carefully considered upgrade path will help you experience and enjoy even greater performance from your digital separates

Naim DAC An instant sonic boost

No matter whether your digital source is a PC or Mac, or an HDX, NDX, CD player or iPod, this superb digital-to-analogue converter will sweeten its sound by eliminating annoying S/PDIF jitter and digital 'noise'. Your music is presented with more definition, more insight and more warmth than ever before. It's simply the best – and most simple – way to transport your digital listening experience to the audiophile realm.

- An ideal upgrade for HDX, NDX, S/PDIF-equipped CD players, Apple devices and more
- Eight 24bit/192kHz-capable S/PDIF inputs and two USB inputs for maximum device support and flexibility
- High-performance output stage

AWARDS 2010

Best Premium DAC

Naim Power Supplies Purify your sound

Adding a separate power supply to your system will improve the timing, clarity and dynamic range of your music by divorcing the main power supply from the player and regulating the output. The XPS (above) and 555 PS in particular are ideally matched to the HDX and NDX, as well as many other separates sources. The result is a tangible improvement to complex passages and more finely graded and faster dynamic shading.

- Each power supply features a large toroidal transformer
- Available with up to seven ultra-low noise outputs and power regulators
- Sleek, anti-vibration, resonance-controlling design with isolating feet

The new Ovator S-400 loudspeaker is an ideal match for the HDX and NDX. Naim's Ovator series is the first range of high-end loudspeakers to employ a Balanced

Mode Radiator: a groundbreaking new drive unit that covers the audio spectrum from 380Hz upwards to beyond human perception. This means that, unlike conventional loudspeakers, there is no crossover in the middle of the critical vocal region to affect its performance.

The Ovator S-400 combines this BMR technology with dual 165mm bass drivers, a stunning 40-litre enclosure and a pressure die-cast aluminium plinth. The result is a supremely natural listening experience with exceptional timing, clarity and soul.

YOUR AUDIO IN PERFECT UNITI

Enjoy audiophile-quality music from a stunning next-generation system

If you want to enjoy your entire digital music library through a compact, flexible audio system, but don't want to compromise on quality or style, Naim's Uniti family is the perfect solution

Streaming top tips

- Make sure that you're using a good-quality wireless router – the one supplied for free by your broadband provider may only be a basic design, and it's simple to upgrade to a better model
- To optimise the strength of your wireless signal, position your router in a central location in your home, off the floor and ideally away from mains cables
- Of a router's many channels, there are three that do not overlap and they are usually set to a default setting. It is often worth changing the channel if you live in an apartment block where other residents may be using the same channel, as this can cause a reduction in signal quality

Combine Uniti products together to form a seamless multi-room hi-fi solution

Naim UnitiServe Rip, store and share

Like the HDX, the Naim UnitiServe makes bit-perfect, uncompressed copies of your CDs, and then stores them ready for seamless multi-room audio using a digital player such as the NaimUniti, UnitiQute or NDX. There's 1TB of storage (up to 1200 lossless CD albums) in the compact 20cm unit, and it'll even link and rip to additional drives.

- 1TB of built-in storage, with ultra-simple CD ripping and full metadata support via Naim Extended Music Database
- Connects and rips to other UPnP-enabled network devices
- Can be connected directly to a local hi-fi system and used as a digital source when connected to a DAC or digitally-equipped amplifier such as SUPERNAIT
- Compact size – just 20cm wide

NaimUniti Award-winning all-in-one

With a CD player, DAB, FM and internet radio, network streaming, plus an integrated amplifier with analogue inputs and onboard DAC, the NaimUniti takes the concept of a one-box hi-fi to a whole new level. Combined with effortless streaming from UPnP sources and simple integration of Apple devices, it could be the only sound system you ever need.

- Simple, intuitive interface for effortless navigation of your musical world
- Seamless playback from iPad, iPhone and iPod Touch, plus control via the n-Stream app
- Effortless wireless streaming from UPnP sources
- Supports all major digital files: MP3, WAV, AAC, FLAC, Apple Lossless (from iPod) and WMA, plus high-res 24bit/96kHz

September 2009

Best Network Music Player E1500+

Naim UnitiQute Mini yet mighty

With all the main NaimUniti features bar the CD drive in a package that's half the width of its big brother, the UnitiQute is crammed with digital audio nous. It's an ideal choice for use in a kitchen or bedroom or as part of a larger multi-room system, but with 30 Watts of amplification per channel, it would be equally at home in your main listening room.

- Supports all the main digital music formats, plus high-res 24bit/96kHz
- Playback and charging of Apple devices through front-panel USB, plus control via Naim's easy-to-use n-Stream app
- Compact size makes it perfect as a second-room player for your wireless music network
- 30 Watts of high-performance amplification per channel

November 2010

Systems Product of the Year

UnitiSystem

Uniti products combine to form a slick multi-room set-up called UnitiSystem – so you could, for example, have a NaimUniti in the lounge and UnitiQute players in the kitchen and bedrooms, with a UnitiServe containing your entire music library in the study.

Summer Sounds ON STREAM

Come out to play this summer

The future of hi-fi is coming to an event near you this summer. Come and hear the next generation of digital hi-fi, including the NDX network player, UnitiSystem wireless multi-room offering and an exclusive preview of the next addition to Naim's digital line-up. We'll see you there.
